KHARMA ELEGANCE COLLECTION

The Elegance collection is succeeding the very successful Ceramique line of high-end loudspeakers from Kharma. The Ceramique loudspeaker line was introduced in 1998 and the use of Ceramique-based drivers was the reason for naming this series like we did. During the past years Kharma has been researching new technologies on how to improve and set a new standard again to the high-end audio world. We are now very proud to offer the very latest high-tech technologies again in the new Elegance series. The shape of the cabinets has been unchanged because the shape is fully functional to the way the sound develops from the loudspeakers. But the beauty of the design has been improved upon, by redesigning the stand and bottom, the redesign of the front cover and many other small design details as well as an impeccable surface finish of the highest quality in the industry

ELEGANCE DB9

The actual size of this new Elegance dB9 is optimized for better performance with respect to its predecessors of the Ceramique series. Moreover the beauty of the design has been improved upon. The mid range of this speaker is formed by the 7-inch Kharma Composite driver which is equipped with a new cone technology developed by Kharma. It consists of ultra high-tech rocket science/formula 1 based fibres created into a setting with optimised behaviour for the purpose. Finite element analysis with advanced computer systems have led to optimized cone-shapes with a near perfect behaviour for a 7-inch driver. The effect of this innovation combined with the new development of a pure Beryllium tweeter is very clearly audible in even a short listening session.

ELEGANCE DB7

The shape of the cabinets of the new Elegance series has been unchanged with respect to its predecessor, the Ceramique series, because the shape is fully functional to the way the sound develops from the loudspeakers. This is a result of the unique polygonal shaped cabinet for optimum phase behaviour and minimum group time-delay. Besides, the cabinet is made of 35 mm MDF to increase the neutrality of the cabinet and is equipped with advanced acoustic damping materials to absorb the energy in a wide frequency range. The beauty of the new Elegance dB7 is shown by the many small details. The speaker is accentuated by many chrome details like the logo plates on the front and side, parts of the completely redesigned SDSS-stand and the detachable grill.

ELEGANCE S7

The latest model of the Elegance series is the new Elegance S7 which stands for single 7, because of the use of a single 7-inch driver for the base section. All Elegance models have the new special feature of trimmable luxury rings around the drivers, which hide the mechanical screws of the driver. The unique feature is that the rings are made magnetic and so can easily be interchanged with other versions of the trimmable rings. New Kharma connectors have especially been designed for the Elegance series, which is done for user convenience and for high pressure quality contact. As a result the Kharma Binding Post system for the Elegance (KBPS-EL) can easily give great contact pressure applied by just the twist of a hand. The internal wire for the Elegance series is a combination of unique ultra pure silver conductors yielding to a highly musical full balanced sound.

The heart of the speaker is formed by the new Kharma Composite Driver

KCD® | New cone technology developed by Kharma International.

ELEGANCE Q4-C

This beautiful new Elegance Center speaker has been developed for home cinema use to be placed just below your flatscreen television. With its 4 drivers + HF driver it has the power to convert your Elegance AV system into a real 3D- soundfield enriching your AV experience with added detail and dynamics. The cabinet is finished in high gloss Kharma colours and will blend in easily in your living room.

ELEGANCE S5-SR

The new Elegance Surround speakers are small and elegant, but fully functional and with an extended bandwidth, perfectly designed to setup an elegant AV system with great power and detail. Using the functional polygon shapes to create true non located surround sound you will find yourself like being immersed in a giant headphone.

ELEGANCE S10-SB-A

The new Elegance Sub is perfect to complete your Elegance AV-system. Based on a 10-inch super longthrow aluminum driver, this subwoofer can rock your bottom. The amplifier inside is of very highend quality, with a DSP (digital signal processor) to engineer and tailor the output to match to your main system and your acoustics. The shape of the Elegance Sub has been designed to match the Elegance mainspeakers, but also to blend in easy in any home environment and at same time the shape is also functional for a very rigid non resonant construction of the cabinet, allowing the subwoofer to be not tracable in the room.

ELEGANCE DB9-S

The actual size of this new Elegance dB9-S is optimized for better performance with respect to its predecessors of the Ceramique series. Moreover the beauty of the design has been improved upon, by redesigning the stand and bottom, the redesign of the front grill and many other small design details. The mid range of this speaker is formed by the new 7-inch Kharma Omega 7 driver which is equipped with a cone technology developed by Kharma. The effect of this innovation combined with the new development of a pure Beryllium tweeter is very clearly audible in even a short listening session.

Elegance grill

One of the many design novelties in the Elegance line is the grill. This new improved grill is made detachable by embedded magnets in both cabinet and grill to really have the freedom to adapt the Elegance dB9 to your own style. With grill the Elegance has an elegant and luxury feeling, where the dB9 without grill shows the beauty of the new composite drivers. Therefore the Elegance dB9 can easily blend in both contemporary as well as modern interiors.

Drivers

All the drivers of the Elegance are fully developed by Kharma. The tweeter is now made of pure Beryllium, which is the next best material to Diamond. Furthermore the speaker is equipped with double 7-inch Kharma Composite Driver (KCD), which is based on a new cone technology especially developed by Kharma. (*Omega 7 for S version*).

Stand

A new Spike Disk Suspension System stand (SDSS-stand) has especially been developed for the Elegance series. This beautiful new stand is made of composite material with a shiny black finish, which is accentuated by a chrome disk and top cover.
