

CINEMA 600 SOUND BAR

Klipsch®

BRING THE CINEMA HOME

Bring decades of cinema expertise to your home theater sound with the Klipsch Cinema 600 Sound Bar. The Cinema 600 is a true 3.1 system, featuring a dedicated center channel speaker for enhanced vocal clarity, and horn-loaded tweeters, just like our legendary professional cinema speakers, for dynamic power in every detail of your music and movies. Add the optional Surround 3's for a true 5.1 surround sound experience.

EASY PLUG AND PLAY

The Cinema 600 is designed for easy set-up. Simply plug in the included HDMI cable or an optical cable to seriously upgrade your TV sound. The included 10" wireless subwoofer is pre-paired to connect automatically out of the box, for a hassle free set up in just minutes.

HEAR EVERY WORD

All new custom tuned dialog modes not only raise the volume of the dialogue in your TV shows and movies, but also optimize the EQ setting of the system, to ensure the dialogue is crisp, clear, and exceptionally intelligible no matter what's happening on screen. Three levels of dialog mode ensure that you can find the perfect setting for your needs.

MOTION SENSING REMOTE

The included premium remote features motion-sensing LED buttons so you're in full control, even when the lights are low. In addition to volume and input selection, the remote lets you adjust subwoofer level, surround level, and sound mode with the push of a button to dial in the perfect listening experience right from your seat.

10-INCH WIRELESS SUBWOOFER

The Cinema 600 comes with a powerful wireless 10" subwoofer - the largest in its class - that can you can place anywhere in your room. Wireless 2.4 GHz technology automatically connects the sound bar and the subwoofer together with close to zero latency for perfect sound in any location. An additional wired subwoofer output meaning you can add a second subwoofer to your setup or simply replace the included wireless subwoofer with the subwoofer of your choice.

DOLBY AUDIO® BUILT IN

The built-in Dolby Digital processing enables powerful cinema experiences with discrete processing for dialog and (optional) surround channels. Hear your movies just like you would in the theater.
