

SERVICE MANUAL

INTEGRATED STEREO AMPLIFIER

SANSUI AU-517/717

SPECIFICATIONS

AU-517

Power output

Min. RMS, both channels driven, from 20 to 20,000 Hz, with no more than 0.025% total harmonic distortion.

65 watts per channel into 8 ohms

Load impedance

8 ohms

Power bandwidth

20 to 20,000 Hz at or below rated min. RMS power output and total harmonic distortion.

Total harmonic distortion (POWER AMP IN)

less than 0.025% at or below rated min. RMS power output

Intermodulation distortion (70 Hz: 7 kHz = 4:1 SMPTE method)

less than 0.025%

Frequency response (at 1 watt) (POWER AMP IN)

0 to 20,000 Hz ± 0 dB -3 dB

RIAA curve deviation (PHONO)

± 0.2 dB -0.2 dB

Damping factor

approximately 60 at 8 ohms load

Input sensitivity and impedance (1 kHz, for rated power output)

PHONO 2.5 mV/47 kilohms

(Max. input capability: 320 mV at 1 kHz, less than 0.01% harmonic distortion)

AUX, TAPE 150 mV/47 kilohms

Output level (1,000 Hz)

TAPE REC (pin-jack) 150mV/47 kilohms

PRE OUT 1V/47 kilohms

Channel separation (1 kHz, at rated power output)

PHONO better than 60 dB

AUX better than 65 dB

Hum and noise (short-circuit, A-network)

PHONO 78 dB

AUX 100 dB

Controls

BASS ± 10 dB (50 Hz)

TREBLE ± 10 dB (15 kHz)

SUBSONIC FILTER -3 dB (16 Hz), 6 dB/oct

LOUDNESS (-30 dB) 9 dB at 50 Hz

7 dB at 10 kHz

Power requirements

Power voltage 100, 120, 220, 240V (50/60Hz)

120V (Usable 110 - 130V)

60 Hz (for U.S.A. & Canada only)

Power consumption

Maximum consumption 660 watts

Rated consumption 345 watts 420 V.A.

Dimensions

430 mm (15-15/16") W

168 mm (6-5/8") H

389 mm (15-3/8") D

Weight

18.5 kg (36.4 lbs) net

18.5 kg (40.8 lbs) packed

* Design and specifications subject to change without notice for improvements.

SANSUI ELECTRIC CO., LTD.

1. SPECIFICATIONS

AU-717

Power output

Min. RMS, both channels driven, from 20 to 20,000 Hz, with no more than 0.025% total harmonic distortion
85 watts per channel into 8 ohms

Load impedance

8 ohms

Power bandwidth

20 to 20,000 Hz at or below rated min. RMS power output and total harmonic distortion

Total harmonic distortion (POWER AMP IN)

less than 0.025% at or below rated min. RMS power output

Intermodulation distortion (70 Hz: 7 kHz = 4:1 SMPTE method)

less than 0.025%

Frequency response (at 1 watt) (POWER AMP IN)

0 to 200,000 Hz +0 dB -3 dB

RIAA curve deviation (PHONO)

+0.2 dB -0.2 dB (20 to 20,000 Hz)

Damping factor

approximately 60 at 8 ohms load

Input sensitivity and impedance (1 kHz, for rated power output)

PHONO 2.5 mV/47 kilohms
(Max. input capability; 350 mV at 1 kHz, less than 0.01% total harmonic distortion)

AUX, TAPE 150 mV/47 kilohms

Output level (1,000 Hz)

TAPE REC (pin jack) 150 mV/47 kilohms
PRE OUT 1 V/47 kilohms

Channel separation (1 kHz, at rated power output)

PHONO better than 60 dB
AUX better than 65 dB

Hum and noise (short-circuit, A-network)

PHONO 78 dB
AUX 100 dB

Controls

BASS ±10 dB (50 Hz)
Tone selector 200, 400 Hz
TREBLE ±10 dB (15 kHz)
Tone selector 3, 6 kHz
SUBSONIC FILTER -3 dB (16 Hz), 6 dB/oct
HIGH FILTER -3 dB (10 kHz), 6 dB/oct
MUTING -20 dB
LOUDNESS (-30 dB) 9 dB at 50 Hz
7 dB at 10 kHz

Power requirements

Power voltage 100, 120, 220, 240V (50/60 Hz)
120V (Usable 110 - 130V)
60 Hz (for U.S.A. & Canada only)

Power consumption

Maximum consumption 735 watts
Rated consumption 425 watts 500 VA

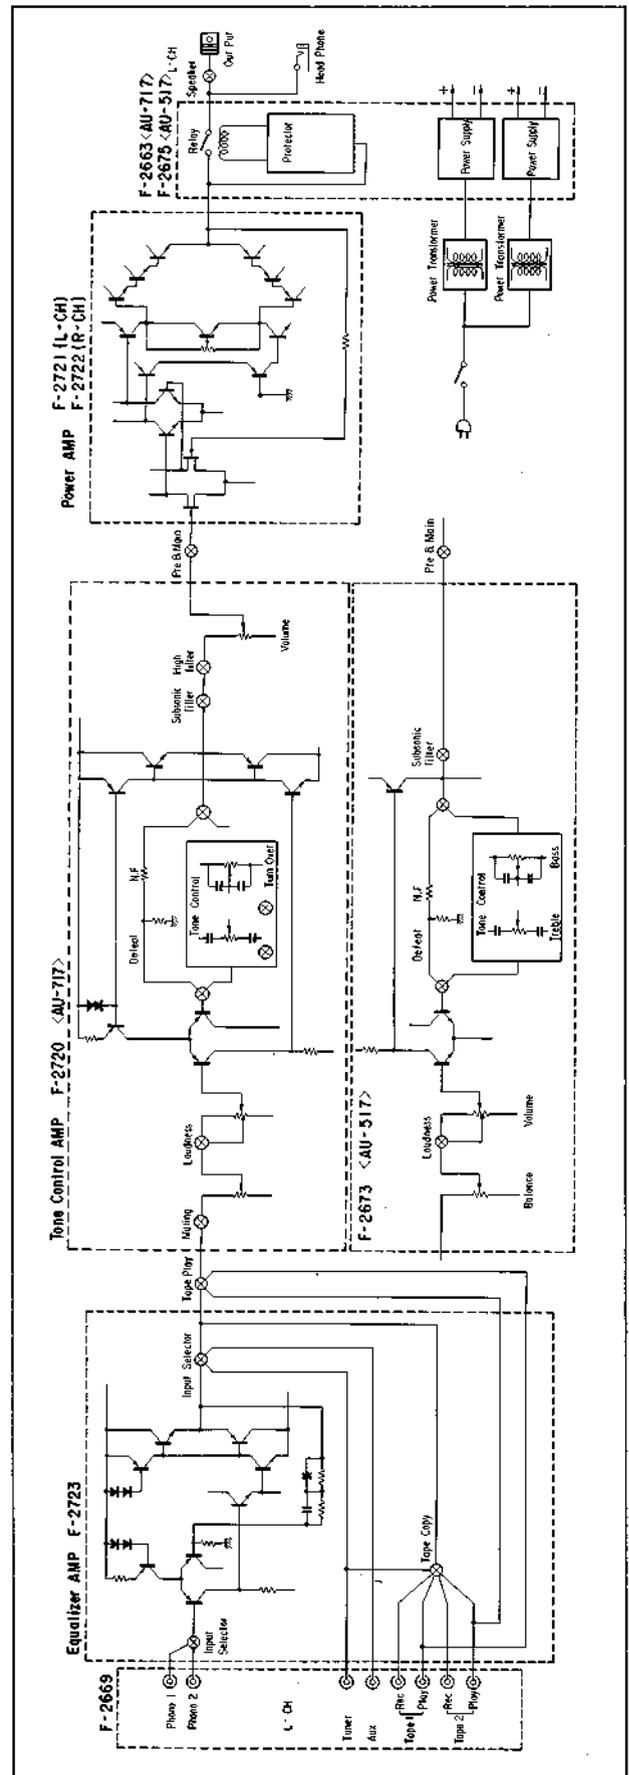

Dimensions

430 mm (16-15/16") W
168 mm (6-5/8") H
389 mm (15-3/8") D

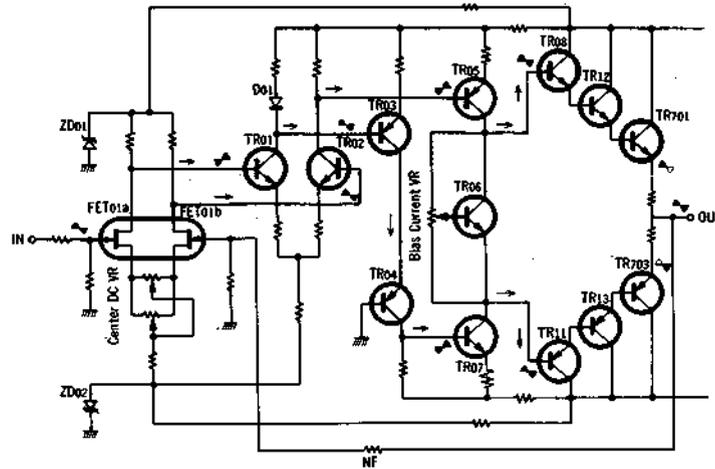

Weight

17.8 kg (39.2 lbs) net
19.8 kg (43.7 lbs) packed

2. BLOCK DIAGRAM

3. ADVANTAGE AND OPERATION OF POWER AMPLIFIER CIRCUITRY SECTION

3-1. Advantage

- ◇ There is necessity not to decrease the phase response till DC range in order to increase the music signal response of extremely low frequency range. Therefore, this amplifier is employing no capacitors except ones for phase compensation, and has an almost perfect transient characteristics.
- ◇ The first stage FET (2SK97) is a dual FET of even characteristics and has a large Gm and no-leakage current at normal temperature.
To avoid the influence by temperature drift, such as center voltage (0V) deviation, this FET is used as differential amplifier and operates at cross point which is the optimum point of drain current (at about 3mA) against the temperature drift.
- ◇ Transistors, TR05 and TR07, the push-pull pre-driver stage functions as current differential amplifier that the stabilized operation can be obtained. In addition, the collector current of these transistors is enough high to make linearity excellent.
- ◇ Since this Amplifier employs phase advancer circuits [C06, C08, C15, R29, C16 and R30], which have not been frequently used, to compensate the phase characteristics on high frequency range and is also made to have enough

current on each stage to increase the through-rate, the performance on high frequency range is conspicuously improved.

- ◇ To avoid the voltage deviation, regulated power supply circuit composed of ZD01, ZD02 is employed.

3-2. Operation

The use of differential amplification at first stage dual FET, (FET01, FET02) and connection of the FET to the differential amplifier composed of TR01, TR02, make possible to obtain enough gain and remarkable low distortion. The output signals of TR01 and TR02 are antiphase. The output signal of TR02 adds to TR05, on the other hand, the output phase of TR01 is inverted by TR03, then, it becomes input signal of TR04 and TR07 which are cascoded connection. The output signals at TR05 and TR07 are inphase that the operation of this stage is push-pull drive and current differential amplification. The power amplifier of the final stage is composed of SEPP (Single Ended Push-Pull) symmetry complementary in 3-stage darlington connection type. TR09 and TR10 are composing current limiter circuit to protect power transistor from break-down by overload.

4. ADJUSTMENTS

4-1. Driver Circuit Board Adjustments (See the picture of top view on page 3.)

- Note: 1. Master Volume.....Minimum
2. Room Temperature.....

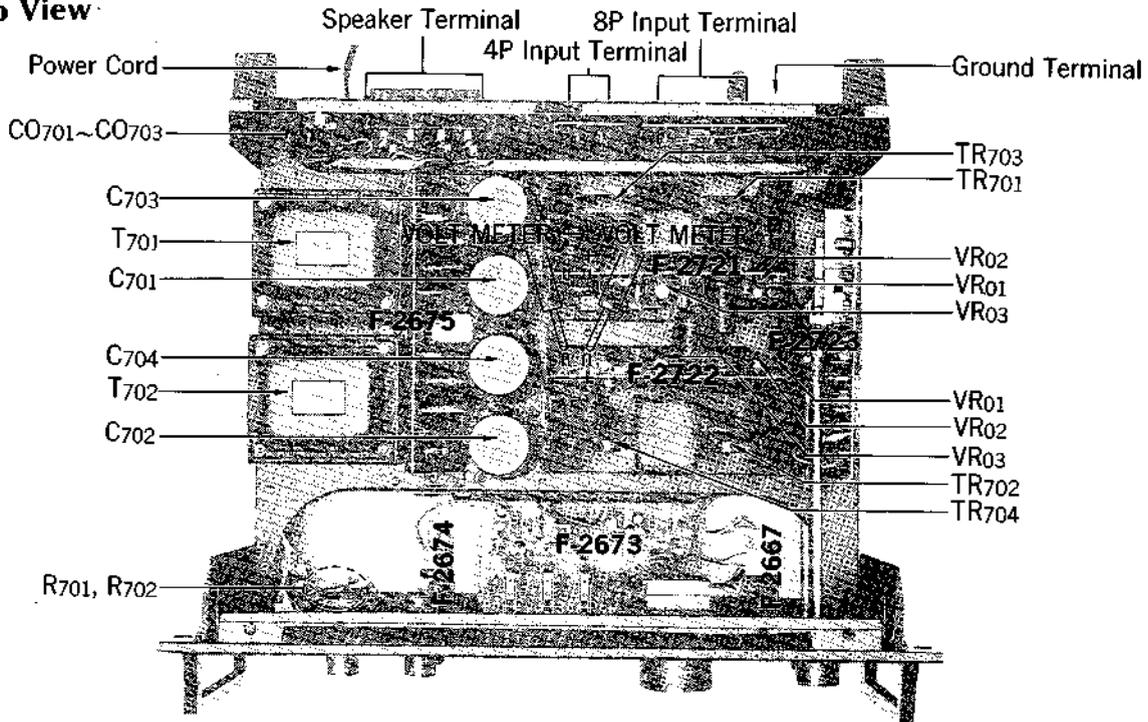

3. For adjustment, run the unit for more than 3 minutes after the power is switched on.

STEP	SUBJECT	EQUIPMENT	MEASURE OUTPUT	ADJUST	ADJUST FOR	CONDITION
1.	DC 0V L-CH	DC Volt Meter	Speaker Terminal	F-2721 VR01, VR02	DC 0V ± 5mV	<ul style="list-style-type: none"> ◦ Set VR01 and VR02 to center position. ◦ Then, for the purpose of proceeding the accurate adjustment, set the voltage to 0 volt by VR01 first and VR02 next.
2.	DC 0V R-CH	Same as above	Same as above	F-2722 VR01, VR02	DC 0V ± 5mV	
3.	Bias Current L-CH	Same as above	TP Terminal (+) (-) of F-2721	F-2721 VR03	DC 20mV ± 1mV	<ul style="list-style-type: none"> ◦ By turning VR03 counterclockwise, the bias current is decreased gradually.
4.	Bias Current R-CH	Same as above	TP Terminal (+) (-) of F-2722	F-2722 VR03	DC 20mV ± 1mV

8. OPERATION OF PROTECTOR CIRCUIT

This protector circuit contains two functions at abnormal condition; a speaker protector circuit against DC voltage appearing at output, and speaker protector circuit against over-current.

A. Speaker Protection Circuit against DC voltage appearing at output (A)

1. When an abnormal negative voltage appears at output (A), TR601 turns off, TR602 turns on and TR603 turns off so that the relay, RL601, keeps off in order to protect loudspeakers from break-down.
2. While the relay, RL601, keeps OFF, zero voltage (center voltage) controlling TR607 through D607 will increase, resultly the LED701 as protector indicator, starts flickering.
3. When abnormal positive voltage appears at output (A), the voltage is supplied to TR602 directly, and the operation of the protector circuit is same as above mentioned 1.

C. Operation of astable multivibrator

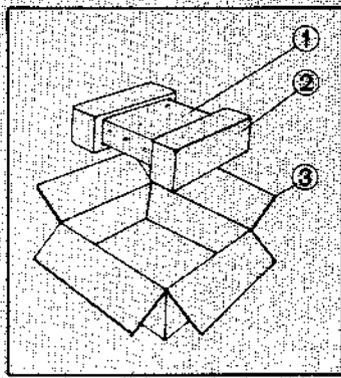

1. When control (bias) voltage is not supplied to the base of TR607 in abnormal condition, TR606 and TR607, on astable multivibrator repeat turning (switching) on and off alternately each other by charging and discharging of capacitors, C606 & C607, resultly, the LED701 as protector indicator continues flickering.
2. When the relay, RL601 is turned on, base voltage of TR607 becomes zero volt through D607 and TR606 becomes ON, resultly LED701 as power indicator lights up.

B. Speaker Protection Circuit against abnormal over-current

1. At the moment when abnormal excessive current flows into power transistors, a transistor (TR09) detecting excessive over-current, on power stage becomes ON.
2. Then, DC voltage at (C) decreases, resultly TR604 turns on, and positive certain voltage appears at (B).
3. As mentioned above, when TR602 turns on, the relay, RL601, keeps OFF; a certain positive voltage at (B) turns on TR605 too, resultly collector voltage of TR605 decreases and its collector voltage keeps a certain voltage at (C) simultaneously.
4. By keeping a certain DC voltage at (C), the LED701 as protector indicator continues flickering, even though all circuits work completely.

9. PACKING LIST

Parts No.	Stock No.	Description
1	9116670	Vinyl Cover
2	9028020	Styrofoam Packing (L)
	9028030	Styrofoam Packing (R)
3	9009710	Carton Case (AU-717)
	9009700	Carton Case (AU-517)

10. ACCESSORY PARTS LIST

Stock No.	Description
9202520	Operating Instructions (AU-517)
9202500	Operating Instructions (AU-717)
5192082	Hexagon Wrench (1.5mm)
9116580	Vinyl Bag For Wrench
9237540	Schematic Diagram (AU-517)
9237550	Schematic Diagram (AU-717)
5396340	Rack Mounting Adaptor (each)
5216100	Rear Stand (each)
